

CONTENTS

I. Takebe Katahiro and his Times

Tsukane OGAWA — Takebe Katahiro — A man of his times: a survey of his life and mathematical thought	3
Kenji UENO — Seki Takakazu and Takebe Katahiro — Two different types of mathematicians	29
Eberhard KNOBLOCH — On the relation between point, indivisible and infinitely small in western mathematics	39
Chikara SASAKI — Takebe Katahiro's inductive methods of numerical calculation in comparison with Jacobi Bernouilli's <i>Ars Conjectandi</i> of 1713	59
Naoki OSADA — Determinants by Seki Takakazu from the group-theoretic viewpoint	83
Zelin XU — Takebe Katahiro and the <i>Shoushili</i> Calendar	101
Tatsuhiko KOBAYASHI — Takebe Katahiro and Nakane Genkei	127
RINA SA — A comparative study of the <i>Huangyu Quanlantu</i> and Takebe Katahiro's <i>Kyōhō Map of the Whole of Japan</i>	137

II. Joseon

Young Wook KIM — Mathematics of the Joseon dynasty — about the <i>Tianyuanshu</i>	157
Sung Sa HONG — Solving equations in the early 18 th century East Asia	175
Jia-Ming YING — Nam Byeong-gil (1820–1869): a Confucian mathematician and a “promoter” of mathematics in late Joseon period	193

III. China

David MUMFORD — Assessing the accuracy of ancient eclipse predictions	211
Makoto TAMURA — On the <i>Litian</i> problem of bamboo slips of the Qin Dynasty collected by Peking University	229
Shirong GUO — The Methods of constructing magic squares in the Chinese Book <i>Sansan Dengshu Tu</i>	235

Zhigang JI — Chinese mathematics and western mathematics integrated in the <i>Tongwen Suanzhi</i>	255
--	-----

IV. Modern East Asia

Wenlin LI — Some aspects of the mathematical exchanges between China and Japan in modern times	273
Jun OZONE — On the table of trigonometric functions that was intro- duced first to Japan	295
Rosalie Joan HOSKING — Solving <i>Sangaku</i> with traditional techniques	311
Steffen DÖLL and Andreas M. HINZ — <i>Kyū-renkan</i> —the Arima sequence	321
Osamu KOTA — Western mathematics on Japanese soil — A history of teaching and learning of mathematics in modern Japan —	337
Harald KÜMMERLE — Hayashi Tsuruichi and the success of the Tōhoku Mathematical Journal as a publication	347

Appendix. Three Key Volumes from the *Taisei Sankei*

Tsukane OGAWA and Mitsuo MORIMOTO — Methods for a circle, Volume 12 of the <i>Taisei Sankei</i>	361
Mitsuo MORIMOTO and Yasuo FUJII — The theory of well-posed equa- tions, Volume 17 of the <i>Taisei Sankei</i>	413
Mitsuo MORIMOTO and Yasuo FUJII — The fifteen examples of alge- braic equations, Volume 19 of the <i>Taisei Sankei</i>	487
